Subject: PL12-0191 Review of Modeling

John,

I received your letter yesterday in regard to hydraulic modeling, dated January 4, 2013. Have you or someone else at the County had the opportunity to review the hydraulic modeling that was previously submitted in support of both the 2010 EIS that covered the levee improvement project and the modeling that the District submitted electronically (CD) as part of this permit application? I would like to first check that all the available modeling and information has been reviewed.

Much of the modeling previously submitted was completed under the Skagit General Investigation Study and covers the entire Nookachamps basin in addition to the Skagit River basin. Additional modeling and reviews of the Skagit GI modeling were also included which also covered the area in question. [The January 2012 report by Northwest Hydraulics is on the CD under the subdirectory "FCD AC Mtg", Skagit_GI_Hydraulic_Effectiveness_Report_12Jan2012.pdf.](#)

I was also curious about the comment period that ended on December 28, 2012. Did you receive any comments and can you please forward to me a copy?

Thanks for your time and effort. If it would be helpful to you, myself and [Lorna Ellestad](#) or other DD12 representatives would be glad to meet with you on this issue.
