

Water Resources Division - Surface Water Branch
207 Federal Building
Tacoma 2, Washington

March 4, 1953

Mr. J. V. B. Wells, Chief
Surface Water Branch
U. S. Geological Survey
Washington 25, D. C.

In reply to your undated letter of February 24, File 44040,
concerning the Skagit River Flood Report:

Your suggestion is noted that the report be returned to
Washington for a year or so on the possibility that Mr. Eisenlohr
or someone in the Special Reports Section could do some work on it
prior to the 1955 fiscal year. We obtained the report from Mr.
Eisenlohr a few months ago, it having been shelved by him for a
year or two. He said he did not have time to do any more work on
it due to the pressure of other duties. We shall be glad to return
it to you if there is a real chance that someone could take the
time to accomplish something on it. As you say, some phases of the
report should be done by someone in this office. Perhaps I should
await further word from you before sending the report.
