Mr. William S. Eisenlohr, Jr.
Hydraulic Engineer
U. S. Geological Survey
Washington, D.C.

Dear Mr. Eisenlohr:

RE: SKAGIT REPORT

I have reviewed my notes as to the needed field work and conclude that one week or slightly less should be enough for that alone.

In case it is not desired to put flood crest graphs in the report, the field work might be done in two or three days.

Of course, as I said, when you were here, it would be possible to complete the report without any field work on my part. However, I would not recommend such procedure.

The most important field work is checking the "N" for the slope sections used at The Dalles. This checking of the "N" can be done by Mr. Veach's office alone.

Very truly yours,

Dictated but
